PROJECT OVERVIEW & VISION

SHER Sanctuary Experiences

*"Where nature is the asset.
Conservation is the discipline."*

LOCATION

Savannes Bay, Micoud
Saint Lucia, West Indies

DOCUMENT REFERENCE

SHER-INV-T1-001-ROI

ISSUED

11 July 2026
Rev ROI

This document is issued to Tier 1 investors by Safeport Security Services Limited (Reg. 2016-C251 · Saint Lucia) trading as SHER Sanctuary Experiences. It is private, non-circulating, and does not constitute a securities offering or investment advice. All financial figures are preliminary and require independent verification.

SECTION 01 • THE OPPORTUNITY

A Rare Convergence of Nature and Capital

Savannes Bay is one of Saint Lucia's most ecologically significant coastal environments. SHER Sanctuary Experiences is building a conservation-led eco-luxury residential estate at its edge — not in spite of that significance, but because of it.

The bay and its surrounding wetland meet a convergence of designations that make the site irreplaceable: RAMSAR Convention protection, the Pointe Sable Environmental Protection Area, and the Scorpion Islet Marine Reserve. No comparable site with this combination of ecological designation, access, and development potential exists elsewhere on the southern Saint Lucia coastline.

The SHER estate sits at the interface between this protected ecosystem and the Micoud hillside — a 4.69-acre position that allows a disciplined residential programme while permanently protecting 46.7% of the estate as conservation land. The residential programme is not the reason the land is valuable. The land is valuable because of what surrounds and penetrates it: living mangrove, protected bay, a RAMSAR wetland in daily ecological function.

RAMSAR

Wetland of International
Importance • Designated 2002

1,038 ha

Pointe Sable Environmental
Protection Area

~15 min

Hewanorra International
Airport (UVF)

Why Savannes Bay

Savannes Bay is located on the southern Atlantic coast of Saint Lucia, in the Micoud district — approximately 15 minutes from Hewanorra International Airport. It is one of the few remaining Caribbean locations where a conservation-quality coastal wetland, a protected marine reserve, and a highland residential position coexist within a single site boundary.

The bay's ecological health is exceptional by Caribbean standards. The mangrove fringe is intact. The Scorpion Islet Marine Reserve protects the bay's reef and seagrass system. Migratory bird species use the RAMSAR wetland seasonally. This ecological richness is not a constraint — it is the differentiator that gives SHER residences their long-term scarcity value.

Investment context: The Caribbean luxury real estate market has consistently demonstrated that proximity to protected natural environments — genuine ecological protection, not greenwash — commands sustained price premiums. Scarcity that cannot be replicated by a competitor is structural. At Savannes Bay, that scarcity is written into international treaty law.

SECTION 02 • THE ESTATE

4.69 Acres at Savannes Bay

204,148

Total estate area (sq ft)
4.69 acres

108,774

Developable area (sq ft)
2.50 acres

95,374

Conservation zone (sq ft)
2.19 acres • 46.7%

The SHER estate is composed of five parcels, each with a defined role in the development and conservation programme. The estate is designed as an integrated whole — not a collection of plots. Every parcel boundary reflects an ecological or programming decision, not an administrative legacy.

The Five Parcels

Parcel	Role	Area	Acquisition Status
Lot 890	Anchor gateway — reception pavilion, café, estate services, solar infrastructure, wastewater management, staff facilities	Estate services zone	Purchased • title registration in progress
Lot 897	Upper residential zone — Cottage Type A cluster (northern), primary estate road and landscaping	Residential / infrastructure	<i>Under acquisition agreement</i>
Lot 905	Mid-slope — secondary residential zone (Cottages and Villas, southern cluster); voluntary no-build conservation covenant applies to conservation portion	Residential + conservation	<i>Under acquisition agreement</i>
Parcel 12	Lower coastal access corridor — mangrove buffer, conservation trail, kayak launch, raised boardwalk. No permanent foundations.	Conservation / access	<i>Under negotiation</i>
Parcel 13	Waterfront — bay edge, mangrove fringe, tidal zone. Conservation only.	Conservation • no build	<i>Under negotiation</i>

Conservation covenant — Lot 905: The no-build conservation commitment on the conservation portion of Lot 905 is a voluntary corporate decision by Safeport Security Services Limited. It is not a condition imposed by any regulatory authority, nor is it the result of planning restrictions. It is a statement of conservation discipline: this land will not be offered for development regardless of any future planning permission that might theoretically allow it. This permanence is the source of the conservation covenant's value — it is irreversible by design.

The 20-residence programme is contained entirely within the 108,774 sq ft developable area. The conservation zone — 95,374 sq ft / 46.7% of the total estate — will never carry a building.

SECTION 03 · THE VISION

Conservation-Led Eco-Luxury

SHER is not a luxury resort that uses conservation as a marketing device. It is a conservation project that has found a financially viable structure. That distinction governs every design decision on the estate.

The SHER Sanctuary Design & Experience Charter (R02, Owner Approved 6 July 2026) is the constitutional document of the estate. Every architectural, operational, and materials decision is subordinate to the Charter. No element of the estate may be implemented that conflicts with its six design pillars.

The Six Design Pillars

PILLAR 01**Preservation**

Low-footprint construction; no clearing beyond the residential zone; drainage contained away from the conservation boundary; raised foundations on the hillside plots to protect terrain and natural drainage flows.

PILLAR 02**Wellness**

Natural materials for indoor air quality; screened-glazed nature connection that does not require habitat disturbance; thermal comfort through passive design and natural ventilation rather than mechanical cooling dependency.

PILLAR 03**Tranquillity**

No vehicle dominance in guest areas; no audible mechanical noise at the conservation boundary; night-time calm enforced by controlled exterior lighting protocol — no spillover into the wetland or marine edge.

PILLAR 04**Luxury**

Premium materials that weather authentically and require no synthetic treatments; durable maintenance regimes that introduce no harmful chemicals near the wetland; the quality of simplicity — not the complexity of ornamentation.

PILLAR 05**Safety & Resilience**

Hurricane-rated construction with continuous load path from roof to foundation; sealed buildings to exclude bats and insects without harmful treatments; wastewater management that prevents any contamination of the wetland buffer or bay.

PILLAR 06**Rebirth & Identity**

SHER's conservation ethic as a commercial differentiator — a sanctuary that communicates renewal and authentic connection to Saint Lucian nature, not the displacement of it. The brand proposition is the ecology itself.

What SHER Is Not

SHER is not a conventional Caribbean resort development. It is not designed around pools, beach clubs, nightlife, or high-density occupancy. It does not seek planning permissions to maximise buildable area. It does not adopt natural materials as an aesthetic choice — they are a structural and ecological commitment. The conservation boundary is not a selling feature that can be quietly renegotiated if a buyer prefers otherwise. These are not restrictions. They are the source of the project's long-term value.

SECTION 04 · THE RESIDENTIAL COLLECTION

20 Residences · Three Typologies

SHER's residential collection is intentionally small. Twenty residences across three distinct types — each designed to express the same conservation DNA through a different spatial experience. No two positions are identical.

Hillside Cottage Type A · 6 For-Sale Units · C-01 to C-06

PHASE 1

SPATIAL EXPERIENCE

One-bedroom sanctuary, 900–1,100 sq ft total experience area. Butterfly or split-butterfly roof — the defining form of the Cottage Type A. Veranda, outdoor shower court, screened living zone. The cottage reads as a crafted shelter within the hillside — not placed on it.

POSITION & CONTEXT

Positioned on the northern and southern slopes of the SHER estate with hillside views across the bay and conservation zone. Each plot elevated above the conservation boundary — privacy and aspect guaranteed by topography, not fencing.

C-07 to C-10 (4 units Cottage Type B) are SHER-retained — not for sale. Retained units form SHER's hospitality programme.

Boutique Condo Type A · 8 For-Sale Units · Condo 01–08

PHASE 1 / 2

SPATIAL EXPERIENCE

Open-plan eco-luxury condominium, 1,020–1,300 sq ft per unit. Concealed steel I-beam primary structural frame — the structural strategy that allows maximum clear-span living areas. Private covered terrace at each level. Stepped courtyard preferred configuration.

POSITION & CONTEXT

Located on Lot E — the coastal condominium parcel at the base of the estate, closest to the conservation trail and kayak launch. Bay aspect from upper-floor units. Stone, timber, and lime render over the concealed steel frame — materials consistent across all SHER typologies.

Villa Type A · 5 Units + 1 Flagship · V-01 to V-06

PHASE 2

SPATIAL EXPERIENCE

Two- to three-bedroom estate villa, 2,750–3,650 sq ft. Private plunge or lap pool. Deep pavilion veranda. Two configuration expressions: Linear View (panoramic bay outlook) and Courtyard/Split-Wing (layered privacy for hillside plots). V-06 is the Flagship Villa — individually designed, price on application.

POSITION & CONTEXT

Southern estate positions — premium southernmost bay views. Each villa on its own plot with sufficient separation to guarantee visual and acoustic privacy. V-06 occupies the estate's most southerly and most coveted position.

This document is provided for preliminary information purposes only and does not constitute a prospectus, securities offering, regulated financial promotion, investment advice, or representation of fact. All figures are preliminary and subject to independent verification. Prospective investors must obtain independent financial, legal and tax advice before making any investment decision. Governed by the laws of Saint Lucia.

SECTION 05 • THE EXPERIENCE PROGRAMME

Living the Sanctuary

The SHER experience programme is not an amenity list. It is the operational expression of the conservation covenant — every experience is designed around the bay's ecology, not in spite of it.

Scorpio's Secret — Kayak & Snorkel

Guided kayak journey across Savannes Bay to Scorpion Islet. Zero-emission vessels; maximum six guests per departure; one landing per day on the islet to protect the nesting environment. The experience is choreographed around tidal and light conditions — no two departures are identical. Guests are told what they can do, and what they must not. The restrictions are part of what makes it rare.

Table d'Eau — Bay Dining

Intimate dining at or beside the water's edge — a curated table that responds to the bay's rhythms. Seasonal menu, locally sourced. Not a restaurant: a single table experience with timing driven by tide, light, and the day's conditions. Operated from SHER's retained Lot 890 gateway infrastructure, available to both residents and vetted outside guests.

Mangrove Immersion Trail

A guided walk through SHER's conservation corridor — raised boardwalk sections, mangrove interpretation, RAMSAR wetland ecology. Designed in consultation with the Saint Lucia National Trust. The trail exists to make the conservation zone legible to guests and residents: not a walk past nature, but a walk within it. Available to residents and to approved educational and conservation partners.

Zero-emission experience design: All watercraft are non-motorised — kayaks and canoes only. No motorised vessels are permitted within SHER's operational programme on Savannes Bay. One landing per day on Scorpion Islet is a self-imposed operational limit, regardless of booking demand. These constraints are not regulatory — they are operational ethics, enforced at the booking level.

The experience programme operates from the Lot 890 gateway infrastructure and from SHER's four retained Cottage Type B units. Hospitality revenue is independent of residential for-sale revenue and is capitalised and operated separately from the residential development programme.

SECTION 06 · CONSERVATION COMMITMENT

46.7% Permanently Protected

Conservation at SHER is not a planning condition to be managed or a marketing claim to be qualified in the small print. It is a foundational corporate commitment that predates and will outlast the current development phase.

95,374

Conservation zone (sq ft)
2.19 acres

46.7%

Proportion of total estate
permanently protected

0

Buildings permitted
in conservation zone · ever

The Covenant

The conservation portion of Lot 905 — 95,374 sq ft / 2.19 acres — is subject to a voluntary no-build covenant held by Safeport Security Services Limited. This is not a condition imposed by the Development Control Authority, the Saint Lucia National Trust, or any other regulatory body. It is a unilateral corporate commitment made as a statement of conservation discipline.

The covenant means this land will never be offered for residential, commercial, or hospitality development — regardless of what future planning permissions might theoretically allow. It is designed to be permanent, not conditional on market conditions, project ownership, or investor preference. The legal form of the covenant and its enforceability in perpetuity are documented at Tier 3.

RAMSAR Context

Savannes Bay Wetlands were designated under the Ramsar Convention on Wetlands in 2002, recognising their international importance as habitat for migratory birds, coastal fish nurseries, and mangrove ecosystem services. The Convention designation is binding on Saint Lucia as a signatory state — it is not a local planning classification that can be varied.

The Pointe Sable Environmental Protection Area (1,038 hectares) provides additional statutory protection at the national level. SHER's conservation covenant exceeds the minimum protection required by these statutory frameworks.

What This Means for Scarcity Value

Scarcity that derives from statutory ecological protection — RAMSAR, EPA, marine reserve — cannot be manufactured by a developer and cannot be removed by a future owner. It is the most durable form of residential scarcity in the Caribbean market. Every residence at SHER derives part of its value from what can never be built beside it. The conservation zone is not a sacrifice of development potential — it is the source of the development's long-term value.

SECTION 07 • CONSTRUCTION PHILOSOPHY

Materials That Earn Their Place

SHER's construction approach is governed by the same discipline as its conservation commitment. Every material must earn its place: structurally, ecologically, and aesthetically. There are no shortcuts and no synthetic substitutes.

The Approved Material Palette

Material	Role	Why SHER Uses It
Marine-grade steel	Primary structural frame (all typologies); concealed I-beam in Condo Type A	Hurricane load path — the only material that reliably delivers a continuous structural load path from roof to foundation in a Saint Lucia wind zone. Hot-dip galvanised + marine epoxy coating for tropical marine durability.
Treated timber	Secondary frame, decking, ceilings, screens, joinery	Warmth, workability, thermal comfort in tropical climates. Treated for durability without synthetic treatments in guest-occupied spaces. Premium or engineered timber grades throughout.
Natural stone	Base courses, wall panels, feature elements	Locally sourced volcanic stone — authentic Saint Lucian materiality, thermal mass, durability. Does not require painting or surface treatment.
Lime render	Internal and external wall finish	Breathable, anti-microbial, and compatible with the humid tropical climate. Does not trap moisture behind the wall surface. Historical track record in the Caribbean. Low embodied carbon.
Reclaimed timber	Joinery, feature elements, furniture-quality detailing	Authenticity of material history. Zero additional embodied carbon for the reclaimed element. Selected pieces only — not a wholesale structural material.
Metal roofing	Standing-seam or concealed-fix metal roof system	Hurricane resilience — no exposed fasteners that can be lifted by negative pressure under storm conditions. Dark bronze, charcoal, or green-black tone consistent with conservation sightline controls.

What SHER does not use: Hemp block, compressed earth, synthetic cladding systems, floodlighting directed toward the conservation boundary, or any material that requires chemical treatment in proximity to the wetland. The material specification is a conservation control, not an aesthetic choice.

Independent structural certifications and detailed build-up specifications for all four product types are available at Tier 2. Detailed structural engineering — geotechnical assessment, professional certifications, load calculations — will be completed by appointed consultants as part of the DCA planning submission.

SECTION 08 • MARKET POSITION

Why Savannes Bay. Why Now.

SHER is not a response to a market trend. It is a position taken on what sustainable value means in the Caribbean residential market over the next decade.

The Differentiation Argument

The Caribbean luxury residential market is mature and competitive. It has produced exceptional projects in Barbados, St Barts, Turks and Caicos, and northern Saint Lucia. The segment that remains under-served is conservation-authentic eco-luxury: residences where the ecological context is not manufactured by a designer but is the result of statutory, permanent protection — and where the development discipline is enforced by constitutional design controls, not just marketing claims.

SHER occupies this position. Its differentiation is not claims — it is structure. The RAMSAR designation cannot be bought or replicated. The conservation covenant cannot be watered down by a future planning application. The Scorpion Islet Marine Reserve is not a marketing name — it is a statutory designation that ensures the marine environment adjacent to SHER will remain protected regardless of development pressure elsewhere on the island.

WHAT THE MARKET REWARDS

- Irreplaceable ecological position
- Conservative scale — 20 residences, not 200
- Conservation covenant with legal permanence
- Authentic local materials and construction philosophy
- Access to a RAMSAR wetland experience that cannot be accessed anywhere else in Saint Lucia on equivalent terms
- 15-minute proximity to international air access

WHAT SAVANNES BAY IS NOT

- Not a resort — no hotel component, no transient occupancy model
- Not high-density — 20 units on 4.69 acres is deliberately low
- Not a branded residence programme tied to an international hotel flag
- Not speculative land subdivision without a conservation basis
- Not dependent on regional tourism growth to sustain value
- Not exposed to the same competitive dynamics as northern Saint Lucia resort properties

The Long-Term Thesis

Ecological scarcity compounds. The Savannes Bay wetland will be more protected, not less, as climate and biodiversity policy tightens internationally. The residences at its edge will be rarer — not more common — as the decade progresses. SHER is positioned at the intersection of conservation scarcity and Caribbean residential demand at the precise moment when the market is beginning to price that scarcity premium correctly.

SECTION 09 · PROJECT STATUS & TIMELINE

Where We Are Now

Planning status: DCA planning permission has not yet been granted. SHER is in the pre-application and design resolution phase. All four residential product types have completed owner-approved design gates (Gates 1–5 for Cottage and Villa; Gates 1–4 for Condo). The planning application will be submitted to the DCA on the basis of this fully resolved design programme. No construction may commence until DCA approval is granted.

Land Acquisition

Parcel	Status	Note
Lot 890 — Gateway anchor parcel	Purchased	Title registration in progress. This is the estate's operational core — reception, services, infrastructure.
Lot 897 — Upper residential	<i>Under acquisition agreement</i>	MOU / heads of terms agreed. Full acquisition subject to legal completion.
Lot 905 — Mid-slope residential + conservation	<i>Under acquisition agreement</i>	Conservation covenant applies to conservation portion. Full acquisition subject to legal completion.
Parcels 12 & 13 — Conservation corridor + waterfront	<i>Under negotiation</i>	Conservation-only use. No permanent structures.

Development Timeline — Indicative

Phase	Activities	Indicative Period
Pre-construction	DCA planning application; regulatory consultations (SLNT, Fisheries, DSD); land acquisition completion; contractor procurement; infrastructure design	Q3–Q4 2026
Phase 1	Lot 890 gateway infrastructure; Cottage Type A C-01–C-06; Condo Type A (8 units); estate road and services Phase 1	Q1–Q3 2027 (12–18 months)
Phase 2	Villa Type A V-01–V-05 + Flagship V-06; Cottages C-07–C-10 (retained); estate infrastructure Phase 2; hospitality soft launch	Q4 2027–Q2 2028 (12–18 months)
Operations	Formal estate opening; all residences complete; experience programme live; conservation trail and kayak programme operational	Q3 2028 target

All timelines are indicative. They are conditional on DCA approval, land acquisition completion, construction programme, and market conditions. No timeline is guaranteed and none should be relied upon as a commitment by Safeport Security Services Limited.

SECTION 10 • THE TEAM & LEGAL ENTITY

Safeport Security Services Limited

The Legal Entity

Item	Detail
Registered name	Safeport Security Services Limited
Registration number	2016-C251
Jurisdiction	Saint Lucia, West Indies
Trading name	SHER Sanctuary Experiences

The Management Team

KEMBLE EMANUEL — MANAGING DIRECTOR

Founder and Managing Director of Safeport Security Services Limited. Responsible for project vision, investor relations, development strategy, and conservation commitment. The SHER Sanctuary Design & Experience Charter and the voluntary conservation covenant are commitments held at the Managing Director level — they are not delegated to subcontractors or external advisors.

OPERATIONAL TEAM

Lead Guide (Sabina) — Guides the Scorpio's Secret, Mangrove Immersion, and bay experiences. Deep local ecological knowledge; trained and certified in marine safety and guided nature experiences.

Marine Safety Officer — On-water safety, vessel maintenance, and maritime compliance for all kayak and canoe operations on Savannes Bay.

Shore Safety Officer — Guest safety on land, trail management, conservation zone monitoring, and estate security.

Professional appointments: Architect of record, structural engineer, civil engineer, and environmental consultant appointments for the DCA planning submission are to be confirmed. SHER is at the stage of engaging these professionals on the basis of the owner-approved design programme. The gate approval process (Gates 1–5) was completed before professional appointments to ensure the planning application is built on a fully resolved owner-approved design basis — not re-iterated during the professional engagement.

Full governance documentation, directorship confirmations, and constitutional documents for the project SPV are available at Tier 3 following NDA execution.

SECTION 11 • NEXT STEPS

The Investor Access Path

I

YOU ARE HERE

Project Overview & Vision, Concept Renders, Estate Map, Materials Brief. You are reading Tier 1 now.

2

TIER 2

Development Financial Model Summary, Planning Status, Environmental Position, Structural Summary, Site Plan, Design Basis. Issued following Tier 1 review and progression response.

3

TIER 3

Full financial model, draft investment agreements, title documentation, SPV structure, NDA required. Issued to qualified investors following Tier 2 review and NDA execution.

What Happens Next

- Review the Tier 1 documents:** This overview, the Concept Renders (SHER-INV-T1-002-R01), the Estate Location Map (SHER-INV-T1-003-R01), and the Materials & Conservation Brief (SHER-INV-T1-004-R01).
- Complete the Tier 1 progression response** in the investor portal at shersanctuary.com/investors. This is not a commitment — it is a structured dialogue about how you are thinking, what questions you have, and whether you would like to proceed to Tier 2.
- Await your Tier 2 access code.** We review every Tier 1 response personally. If your thinking is aligned with the project, your Tier 2 code will be issued within 24–48 hours.
- Tier 2** contains the development economics, planning status, and detailed technical summaries. An NDA will be required before or immediately upon receiving your Tier 3 access code.
- Tier 3** is the final access level — full financial model, legal documentation, and draft investment terms. Tier 3 is available only to investors who have completed the Tier 1 and Tier 2 review processes and executed the SHER NDA.

Contact: All Tier 1 questions should be directed to bookings@shersanctuary.com with the subject line "Tier 1 — [Your Name]." We do not respond to speculative or unqualified enquiries. If you received a Tier 1 access code, your enquiry will receive a personal response.

Legal notices, Privacy Policy, Terms of Access, and Cookie Policy are published at shersanctuary.com/legal/
